

# Making projects cost-effective & efficient with Enterprise Project Performance (EPP)

Forrester Consulting conducted a Total Economic Impact™ study to examine the potential returns enterprise can realize by deploying the EcoSys™ Enterprise Project Performance (EPP) platform.

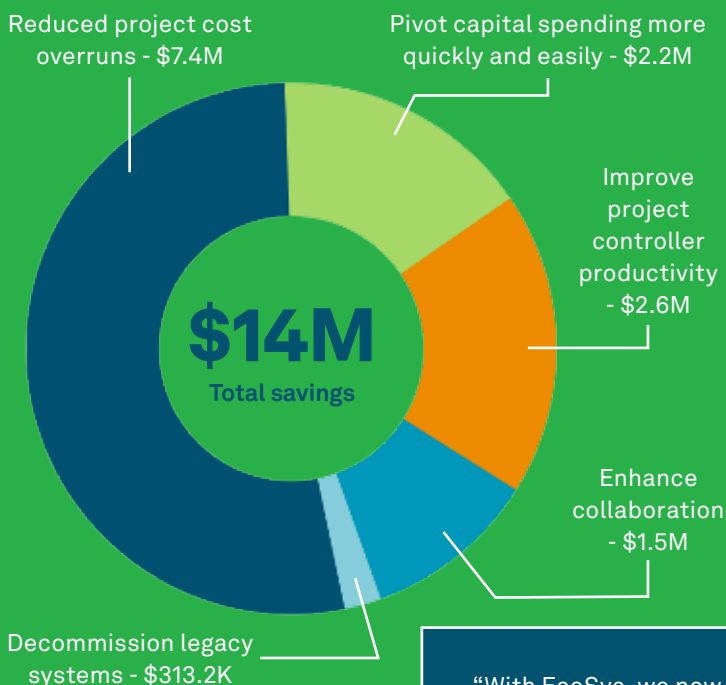

## Benefits of an EPP approach

-  Enhanced visibility for all stakeholders
-  Access to near real-time performance data
-  Integrated management systems
-  Capital spend forecast accuracy
-  A richer data environment

**85%**  
ROI

**\$6.42M**  
Net present  
value

**21 month**  
Payback  
period

## EcoSys empowers users to:

### Be more cost effective

Consolidate procurements - Identify similar but separate procurements and obtain resources through larger buys, resulting in better prices.

### Improve predictability

Provide accurate forecasts - EcoSys reduced variations in forecasts, providing more accurate data, leading to more effective project plans.

### Make better decisions

Gain complete visibility - Managers obtained a singular view of the entire project portfolio which informed their strategies. They were given the tools to choose more profitable projects.

**Reduction in  
project cost  
overruns**

**Increase in  
project controller  
productivity**

**Productivity  
recapture rate  
for employees**

"With EcoSys, we now have visibility into our projects and across all our portfolios in one spot. We didn't have that before. Before there were a lot of spreadsheets, project lists and so forth. With EcoSys, we can see what kind of a strategic fit projects are and how they align with our business objectives."

- Director of  
Portfolio Management,  
Manufacturing
